EDUCATION

Western University **Expected 2028**

Bachelor of Science Honors Specialization in Computer Science

- Relevant Coursework: Data Structures and Algorithms, Computer Organization and Architecture, Intro to Machine Learning, Networks I, Accounting and Business Analysis (Ivey Business Foundations)

EXPERIENCE

Loblaw Companies Limited **Summer 2025, Summer 2026**

Associate Merchant Intern

- Automated the weekly sales reporting process using VBA, generating email-ready reports and applying numerical sentiment analysis to sales trends, reducing a 3-hour manual process to approximately 30 minutes.
- Coordinated the transition between vendors, transitioning ordering from single-item to case-pack and creating the implementation schedule, resulting in a 15% reduction in shrink and improved inventory accuracy.
- Collaborated with teams across merchandising, supply chain, and store operations to bring promotional events together and went to sites to ensure programs were being executed and implemented properly.
- Served on the co-op committee where I planned and led a case competition with 70 attendees, the largest turnout yet, where the winning solution was presented to the Chief Digital Officer.

Computer Science Undergraduate Society (CSUS) **December 2024 – Present**

Externals Director and Developer

- Planned and organized career talks and networking events for CS students at Western, connecting students directly with industry professionals and exposing them to diverse career paths within the tech sector.
- Partnered with an external vendor to coordinate the production of official CSUS merchandise, helping translate the society's branding into a finished products for members to wear.
- Developed the chat feature for a study-group application that connects students with peers, enabling students to message one another and coordinate study sessions, built with typescript.

PROJECTS

Pocket Types | Java, JavaFX, JSON (GSON), JUnit GitHub

- Collaborated with peers at Western University to develop a combat-driven typing game in JavaFX designed to improve typing speed and accuracy through gameplay.
- Implemented real-time leaderboards and player statistics tracking, recording WPM, accuracy, high scores, and level progression to provide feedback on player performance.
- Developed persistent user accounts and admin/parental controls using JSON (GSON), with JUnit tests to validate core application functionality.

UPC Verifier | ARM7 Assembly GitHub

- Developed an ARM7 assembly program to validate UPC-A barcodes by implementing the UPC check-digit algorithm in order to test my understanding of register manipulation, branching, and memory addressing.
- Optimized arithmetic operations using bit shifts and conditional execution, reducing multiplication and control-flow instructions required for checksum calculations.

Leafdle | React, JavaScript, Next.js, Python, Pandas Live Demo

- Developed an interactive Wordle-style game that integrates Toronto Maple Leafs player data for gameplay and player-based guessing, with clues based on position, draft year, team, nationality, and jersey number.
- Created an automated web-scrapping script to fetch, parse, and process historical NHL REST API data, aggregating metadata and draft statistics for 1,000+ athletes into structured JSON.

SKILLS & INTERESTS

Technical Skills: Java, Python, C, C#, JavaScript, React, Unity, Node.js, HTML, CSS, Flask, Firebase, numpy, pandas, Office 365, Figma, Adobe, Excel, Windows and Unix-like operating systems

Volunteering: YMCA Teen Night, Illume 2024 Sports Festival, Hack The 6ix 2026, UWO Cancer Awareness

Interests: Golf, Concerts, Live Sporting Events, Triathlons
